**Details of Session (including aim and scope):****Aim:**

Artificial intelligence is covering more and more areas, including those related to IT systems in e-commerce. In recent years, there has been intensive development of information technology (IT), information systems (IS) and artificial intelligence (or its individual elements) and their applications in electronic businesses and e-commerce. This applies to systems and tools such as CMS, as well as customer service and entire production (CRM, ERP, etc.). This brings new opportunities, but also challenges related to the demand for highly qualified employees with digital skills.

The aim of the session is to create an opportunity to present research results, exchange experiences and discuss issues related to information technologies and information systems, as well as artificial intelligence in e-commerce and e-businesses.

We are looking forward to receiving articles describing the results of quantitative and qualitative research, as well as case studies.
